Employee Search Help

## Employee search tips

[Print](#) [Close](#)

The general format of a name search is :

`LastName[, FirstName]`

**LastName (R):**

You can search for employee last names by any of these methods:

SEARCH TYPE	EXPLANATION
<b>Soundex</b>	Type a last name, such as PETERSON. The search matches the name you typed, as well as other similar sounding names, such as PATTERSON, PETERS, PETERSEN, AND PETERKIN. For this and all other searches by name, the names are <i>not</i> case sensitive. In other words, all of the following are the same: PETERSON, Peterson, peterston, and pETERSON.
<b>Exact Match</b>	To search for an exact match to a last name, type the complete name, followed by a space and a slash (/). For example, type the following to match only the last name PETERSON:  <code>PETERSON /</code>  Be sure to type a space between the end of the name and the slash.
<b>Exact Match and Soundex</b>	You can combine an exact match and a soundex search, as in the following example:  <code>LAR/SON</code> <ul style="list-style-type: none"><li>• The letters to the left of the slash (LAR) are an exact match.</li><li>• The letters to the right of the slash (SON) are a soundex search.</li></ul> For a name to match, the first three letters must be LAR, and the rest of the name can be anything that sounds like SON. Thus, this search matches names like LARKIN, LARSEN, and LARSON.
<b>Partial Word (@)</b>	Type the first few letters of a name followed by an @ sign. This search requires that you <u>type at least one letter</u> before the @ sign.  For example, type <code>JOHN@</code> to match all names that begin with those letters. This search matches JOHNSON, JOHNSEN, and JOHNSTON. However, this partial word search does not match JONSON, JONES, and JONSEN.

# Search Help – Page 2

Employee Search Help	
<b>Wildcard (*)</b>	<p>Type a * to do a wildcard match.</p> <ul style="list-style-type: none"><li>Type an * by itself to search for all last names. You can combine this global search with other criteria, such as a <b>First name</b> or <b>Work Loc.</b></li><li>Type one or more letters followed by an * to get part of the alphabet. For example, type <u>G*</u> to list all last names starting with G and going through the end of the alphabet.</li></ul>
<b>Substring (~) (QCC Only)</b>	<p>Type full or part of a name followed by a tilde (~). This will search for your input expression occurring anywhere within a last name. For example:</p> <ul style="list-style-type: none"><li>Type <u>SMITH~</u> to search for all last names containing SMITH in it. Thus, this search will include last names like SMITHSON, ASMITHE, and GOLDSMITH.</li><li>Type <u>-~</u> to find all hyphenated last names.</li><li>Type <u>JR~</u> to find all last names containing JR.</li></ul>
<b>All-District Search (QCC Only)</b>	<p>Type an &amp; after the last name to search for that last name across all districts. For example:</p> <ul style="list-style-type: none"><li>Type <u>SMITH&amp;</u> to search for all employees with last name SMITH across all districts.</li><li><b>Note:</b> The all-district search identifier (&amp;) can't be used in conjunction with the partial-word (@) or wild-card (*) identifiers.</li></ul>
<b>Social Security Number</b>	<p>Type 9 digits and wildcards to search by SSN. You can do an exact match or use wildcards.</p> <p>The format is: nnnnnnnnn# (or nnnnnnnnn&amp; to search all districts)</p> <ul style="list-style-type: none"><li>Replace each <i>n</i> with a digit from 0 through 9 or a ? (wildcard that stands for a digit)</li><li>Do not type any dashes or spaces between the parts of the SSN.</li><li>Type a # as the tenth character.</li><li>If &amp; is used as the tenth character (instead of #), the search scope will include all districts.</li></ul> <p>Here are some examples of how to search using this method:</p> <ul style="list-style-type: none"><li>Type <u>445329933#</u> for an exact match on a SSN 445-32-9933.</li><li>Type <u>?????9933#</u> to match all SSNs that end with the digits 9933 (xxx-xx-9933)</li><li>Type <u>445????933#</u> to match all SSNs that begin with the digits 445 and end with the digits 9933 (445-xx-9933).</li></ul>

# Search Help – Page 3

Employee Search Help

<b>ExtRef</b>	Type an External Reference Number followed by a period.  The ExtRef can be up to 6 digits long. You do not need to type the leading zeros. For example, you can type Ext Ref 000398 this way: <u>398.</u>  The final period is required to make the program search for an ExtRef.
---------------	---

**FirstName (0):**

The FirstName is optional and is interpreted in the following ways:

- Leave blank if you do not want to search by first name.
- To specify FirstName, insert a comma(,) after LastName and type one or more names separated by a "|".
- Type an & after the first-name to search for all employees with that first name across all districts. For example, type SMITH, JOHN& to search for all employees with last name SMITH and first name JOHN across all districts.
- **Note:** The all-district search identifier (&) can't be used in conjunction with the partial-word (@) or wild-card (\*) identifiers.

Here are some examples of how to specify FirstName in your search:

- Type JAN to find all first names that begin with those letters, such as JAN, JANET, JANICE etc.
- Type L|SA|FRED to find the following:
  - All first names that begin with L.
  - All first names that begin with SA, like SAM, SAMUEL etc.
  - All first names that begin with FRED, like FRED, FREDDY etc.

**NOTE:** The search for the first name also checks the preferred name on the MA screen. The **First Name** field contains the person's real first name. The **Preferred** field contains a preferred name. For example, the **First Name** for an employee may be Elizabeth, but the **Preferred** name may be Beth.

Simple Time Sheet Import (MED/ES)

This simple time-sheet import process imports units (hours/days) associated with an accountclass and posts to an existing pay-line which is defined as 'NML', Hourly or Daily, with units posted by account ('U'). You should prepare your data as three (3) columns of data in this order:

Column	Max Width	Description
1	9	SSN or ExtRef of the employee. Values 6 digits or less are interpreted as ExtRef and values for ssn must be a full nine (9) digits.
2	50	Accountclass. This should be unformatted.
3	6	Units in the format of ###.## which allows a maximum value of 999.99. You do not have to provide leading zero values, but please provide the '.00' for whole units

Operational Notes

-----

An employee can only have one (1) pay-line that qualifies for posting. If the employee has more than one then an error is generated and no posting for that employee will occur.

You can get a verification and/or posting report directly from this import tool.

# Payroll Data Import Help - Timesheet

The screenshot shows a software window titled "Time Sheet Import" with a menu bar (File, Export, Format) and a toolbar. The main content area contains the following text:

Time Sheet Import

This simple time-sheet import process imports units (hours/days) associated with an accountclass and posts to an existing pay-line which matches the supplied pay-type and pay rate, is Hourly or Daily, with units posted by account ('U'). You should prepare your data as five (5) columns of data in this order:

Column	Max Width	Description
1	9	SSN or ExtRef of the employee. Values 6 digits or less are interpreted as ExtRef and values for ssn must be a full nine (9) digits.
2	50	Accountclass. This should be unformatted.
3	6	Units in the format of ###.## which allows a maximum value of 999.99. You do not have to provide leading zero values, but please provide the '.00' for whole units
4	4	Pay Type.
5	15	Pay rate in the format of #####.## which allows a maximum value of 99999.99. You do not have to provide leading zero values, but please provide the '.00' for zero rates.

Operational Notes

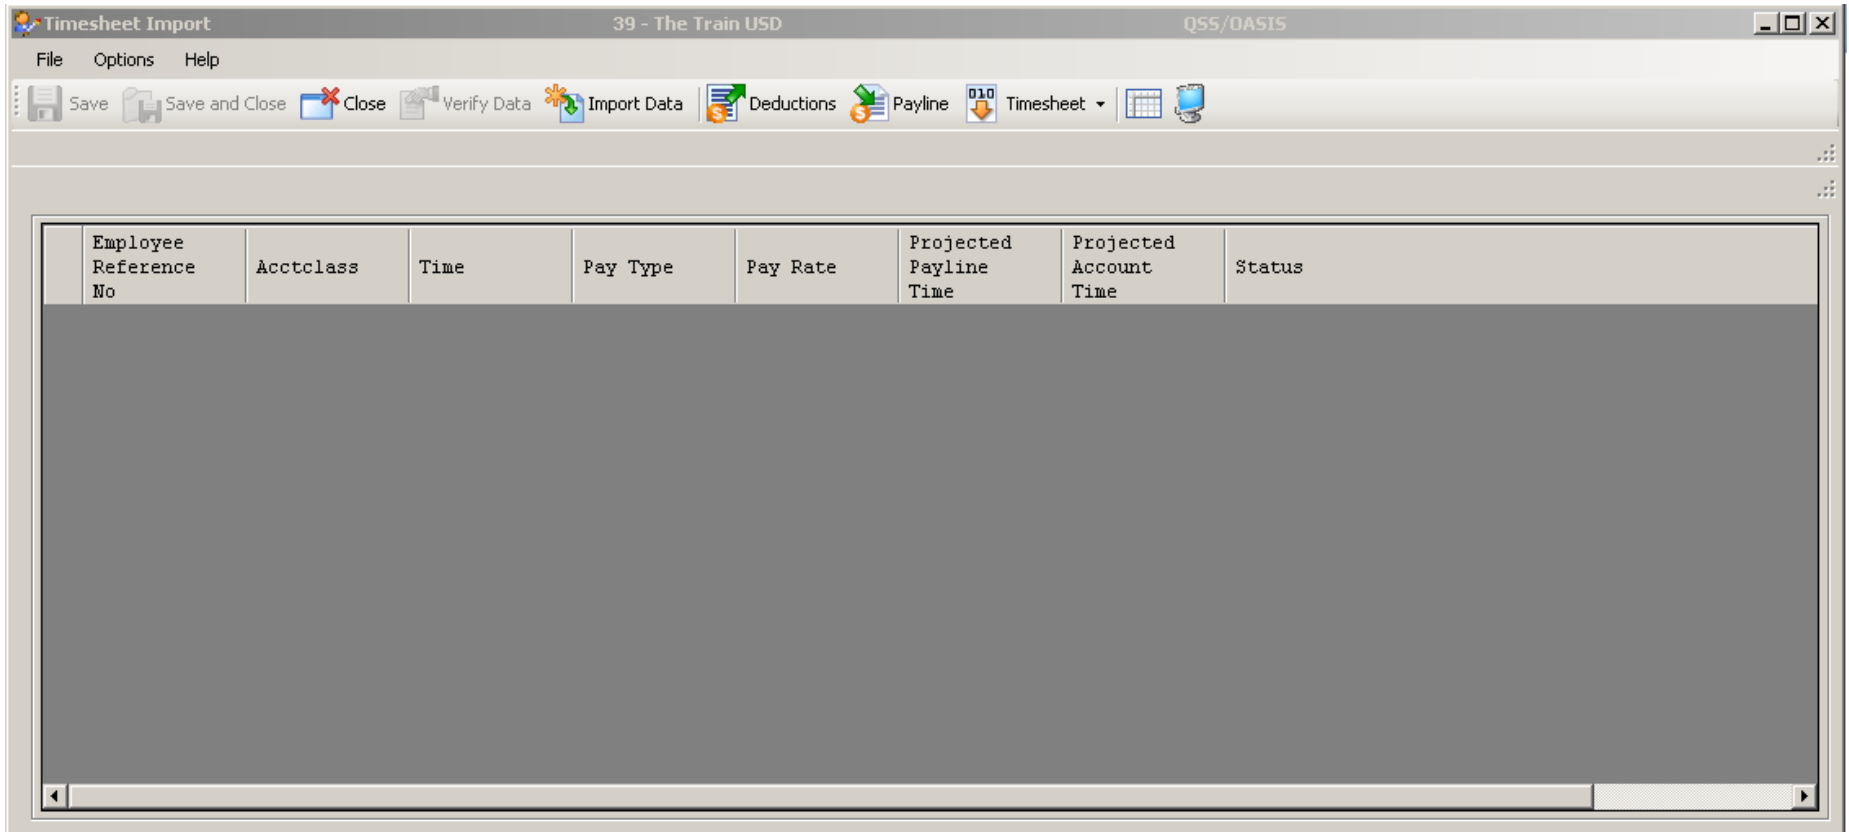

-----

An employee can have one or more pay-lines that qualifies for posting, but the first pay-line found will be used for the posting. It matches data on Pay Type, Pay Rate and Accountclass. If no matching accountclass is found the accountclass will be added to the first pay-line that qualifies for posting and has an available slot to add the account. If no matching paylines are found or no available account slots are found on any matching payline without the account, then an error is generated and no posting will occur.

You can get a verification and/or posting report directly from this import tool.
