

## QSDK Product Information

**QSDK**, a toolkit by **QSS**, is a subroutine library for HP3000 programmers who wish to develop network applications for their HP3000 without the hassle of learning network programming. This is what you get with **QSDK**:

- Over 25 subroutines which encapsulate NetIPC and common MPE/iX intrinsics for building listeners, servers, clients, and creating complete networked applications.
  - Full encryption support for establishing secure communications over the network.
  - Advanced features for implementing deferred connections, client IP address identification and nowait socket I/O operations.
  - File transfer subroutine for easy transfer of data from the HP 3000.
  - VB functions for converting HP data types into common VB types.
  - Complete source code to sample listener and servers.
  - Reference manual which describes the basics of TCP programming on the HP3000 and how to call the QSDK subroutines.
  - [QWEBS](#) - a full featured WEB Server the HP3000.
- 

QSDK is now available for purchase. You can order your complete Server Developer's Kit (includes QWEBS) or you can download the 'attached' QSDK demo package with VB samples [673k]. For pricing, contact Duane Percox ([duane@qss.com](mailto:duane@qss.com)) for a quote.

---

Or you can read the QSDK Reference Manual in [Adobe](#) Acrobat format in the 'attached' Reference Manual file.
